| i4500R / i5500 Firmware V2.3.4 Release Note |
|--|

[Release Date]

April.30, 2009

[Bug fixed]

1. Translate English "Dedicated spares" into German, French, Russian, and Simplified Chinese.
2. Naming UDV, with special characters, ex, "udv&" will make web UI hang at "Loading".
3. In console UI, the company & product name disappeared after checking PD's'More Information'.
4. It's invalid to attach LUN over 255 in Console UI, and it pops up 'No LUN available'.
5. In the web UI, "/System config/SNMP", the default events level are changed to"WARNING" and "ERROR" instead of "INFO".

[Feature change]

1. Display hard drives firmware versions on Web/Console UI.
2. Add code to let user create UDV without RAID initialization in RAID 3/5/6/30/50/60.
